

Figure B1. Northeast Region Ocean Pout – Northwestern Atlantic Coast.  $B_{msy}$  proxy is in kg/tow.

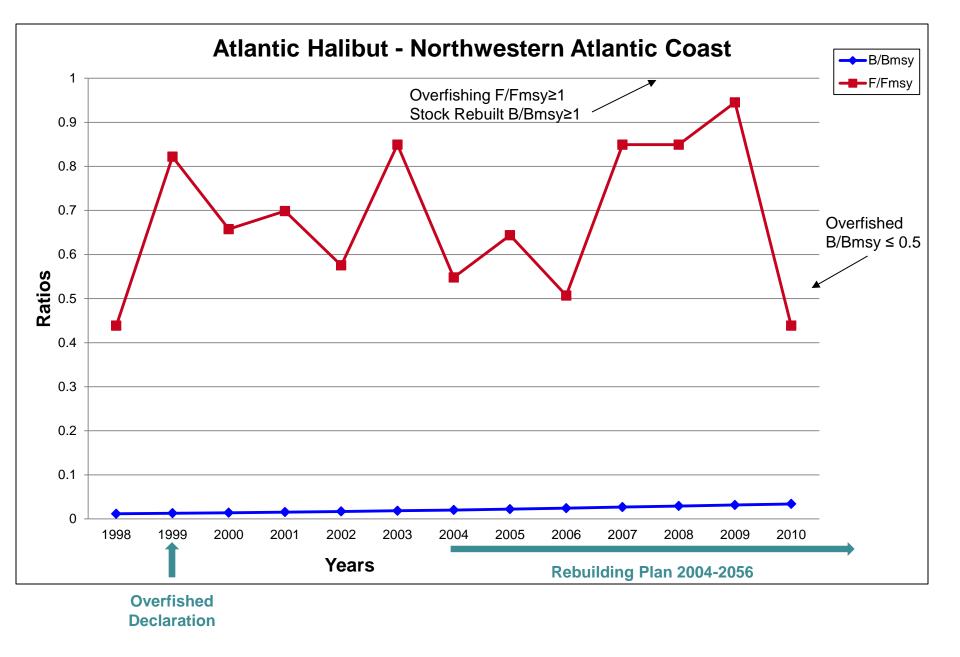

Figure B2. Northeast Region Atlantic Halibut – Northwestern Atlantic Coast

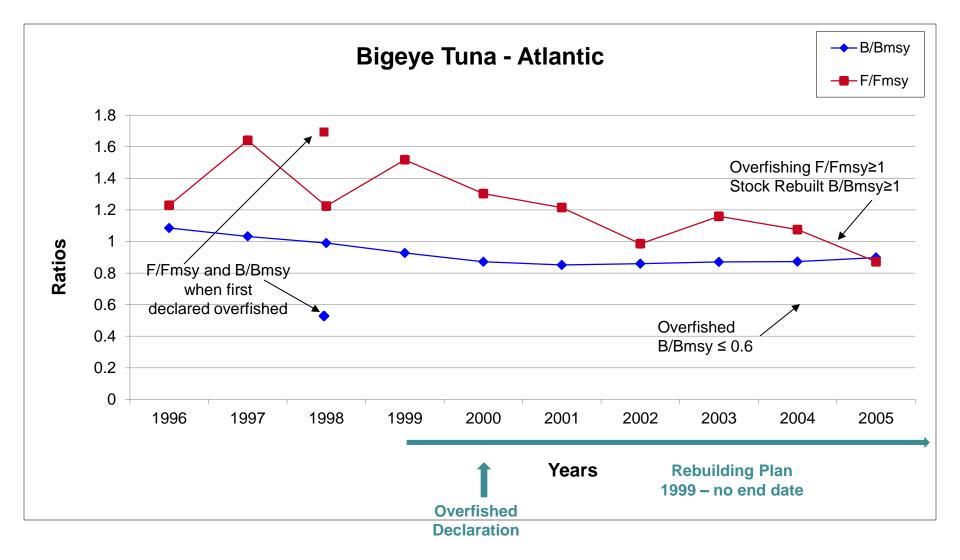

Figure B3. Highly Migratory Species Bigeye Tuna - Atlantic. Rebuilding plan was implemented prior to overfished declaration in anticipation of stock being declared overfished. Due to the periodic recalculation of F and B by stock assessment scientists, the initial estimates of F and B used in the overfished declaration are included to illustrate the uncertainty of stock assessment estimates. No rebuilding target end date can be estimated for this stock.

<sup>\*</sup>Rebuilding plan has not been internationally implemented.

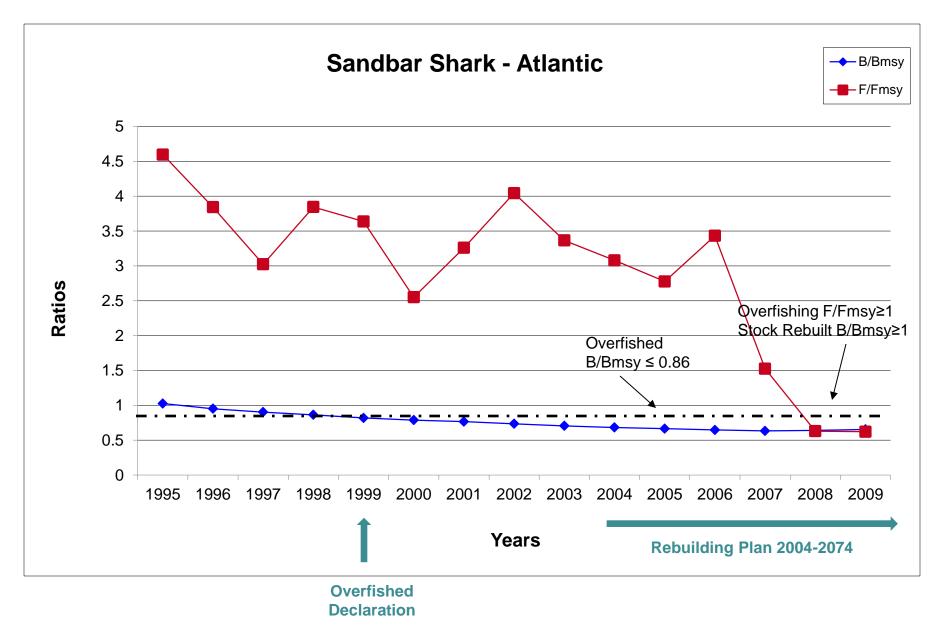

Figure B4. Highly Migratory Species Sandbar Shark – Atlantic. This time series is the base case run, which is one of several equally plausible models. FMP has not been internationally implemented.
